REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach: an apparatus for use in attaching structural members to one another using fasteners comprising: a positioning plate, the positioning plate having a top end surface and a bottom end surface, a fastener drive bore extending between and through the top and bottom surfaces, the fastener drive bore being coaxial with the spindle, and telescoping means coupling the positioning plate to the driver so that the driver and the spindle can be moved toward and away from the top end surface of the positioning plate; whereby when the bottom end surface of the positioning plate is positioned on a first structural member that is to be attached to an underlying second structural member, the telescoping means permits the driver and spindle to be moved toward the first structural member to bring a tool bit attached to the spindle into engagement with the head of a fastener positioned in the fastener drive bore, so that operation of the driver will cause the fastener to be driven through the first structural member into the second structural member under the rotational and impact forces transmitted to the spindle by said driver in combination with the other elements of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
